

Tattoo Pain - A Reality with a Remedy:

Most people will experience mild to moderate pain whilst being tattooed. For some, the prospect of this pain actually prevents them from getting the tattoo they've always wanted.

Some believe that people who can't handle some pain shouldn't get a tattoo. We disagree. That's why we've formulated a Topical Anaesthetic that has been developed specifically for tattoo applications.

Elixir Tattoo Ease is used to prepare and numb the skin for pain or discomfort while having a tattoo. No prescription is required for Elixir Tattoo Ease cream, which numbs the skin in about 45 minutes and can provide relief for up to three hours. We also offer stronger and longer lasting formulations which require a prescription from a medical practitioner.

How it Works:

Elixir Tattoo Ease contains a specialised formulations Lignocaine, Prilocaine and Tetracaine. These topical anaesthetics work by interrupting the signal transmission from nerve endings to the brain, which prevents nerve based electrical signals from activating into a pain sensation.

Made By our Qualified Compounding Pharmacists:

Elixir Tattoo Ease has been specially formulated by Jamie Leong, a Compounding Pharmacist with more than 13 years experience as a practising pharmacist. The formulation has been tested to ensure it will make your customers more comfortable during their tattoo session(s).

About Elixir Tattoo Ease:

🌿 Active ingredients - Lignocaine 10%; or
- Lignocaine 4.5% and Tetracaine 4.5%; or
- Lignocaine 4%, Prilocaine 3% and Tetracaine 3%.

🌿 Quick acting (from 45 minutes) and long lasting up to 3 hours.
